

Name: \_\_\_\_\_

Quiz #8

- 1) The book lists five superficial thoracic muscles that you will be exposing today. These are the muscles located across the chest of the cat/rabbit. Name three of them:
  
- 2) It is important to note that the left and right portions of the abdominal muscles of the cat/rabbit are separated by a white line of connective tissue known as the \_\_\_\_\_.
  
- 3) The book lists five superficial back muscles. These are muscles located between the shoulders of the cat/rabbit. Name three of them:
  
- 4) The external oblique, internal oblique, transversus abdominis, and rectus abdominis are the four primary muscles that compose the thin sheet-like muscular wall around the abdomen. These muscles are used to \_\_\_\_\_ the abdominal region.
  
- 5) The \_\_\_\_\_ brachii has two heads that flex the forearm synergistically with the brachialis, supinating the manus and stabilizing the shoulder joint, whereas the \_\_\_\_\_ brachii has three heads and is used to extend the forearm.
  
- 6) There is more than \_\_\_\_\_ way to skin a cat (or a rabbit really).

#### Word Bank

Acromiodeltoid	Longissimus Dorsi
Acromiotrapezius	Masseter
Anconeus	One
Biceps	Pectoantibrachialis
Brachialis	Pectoralis Major
Clavobrachialis	Pectoralis Minor
Clavotrapezius	Rectus Abdominis
Compress	Serratus Ventralis
Coracobrachialis	Spinalis Dorsi
Depression	Spinodeltoid
Epitrochlearis	Spinotrapezius
External Oblique	Subscapularis
Internal Oblique	Teres Minor
Latissimus Dorsi	Transversus Abdominis
Levator Scapulae Ventralis	Triceps
Linea Alba	Xiphohumeralis
